If you are using the built-in Windows Explorer as an alternative to a more capable file manager (or you just want to use a built-in one), then you have a bad luck. The Windows Explorer is not capable of understanding or showing the hidden directories and subdirectories in your computer. It doesn't matter if they are in the root folder, or in another drive letter or partition; the program will never display them. Instead, the program simply lists the regular folders and files in the root folder, and if you use it on other locations, it shows you the regular folders and files from the other location as well. There are two ways to add the hidden directories to the Windows Explorer, and you can choose the method you prefer.

**Method 1: Overwrite the ".ini" files** If you have noticed, the Windows Explorer always loads the ".ini" files that are at the root folder of your Windows partition. In other words, every time you open the Windows Explorer, it will load the ".ini" files of the root directory, which means you can easily overwrite them.

**How to do it:**

**Step 1:** Find out the name of your hidden folder.

**Step 2:** Open the Windows Explorer and start a search for the folder by typing its name in the search box.

**Step 3:** The search will return a result, and the Windows Explorer will display all the found files and folders.

**Step 4:** You will see a result similar to this one.

**Step 5:** Press CTRL+A on the keyboard to select all the found files and folders, and then press Delete on the keyboard to delete them all. Now the hidden folder is replaced by the regular folder, and the Windows Explorer will display all the files and folders that are included in this folder.

**Method 2: Edit the registry** By using the first method, you have saved the time and effort of deleting the files manually. However, it's not possible to add the hidden directories to the Windows Explorer in this manner. That's why we will show you another method, which will give you the same results as above, without doing any work.

**How to do it:**

**Step 1:** On the keyboard, press the Windows key and the R key simultaneously.

**Step 2:** In the search box that appears
