New users of the application and photographers who use professional photo services, such as those shutterbug.com or SmugMug, can use Lightroom 5 to quickly share images directly from the service's online gallery and export them back to Lightroom. With these new services, you can even launch Lightroom right from the online images to try and modify them on the fly. While the iPad Pro itself has a beautiful screen, it's not the best smart device for Photoshop. I haven't tried any other apps aside from Photoshop, but the only thing I can imagine working would be Dimensions. So, if you're working with high-res images, Dimensions may be something to consider. It won't replace a good desktop or laptop, but if you're trying to get work done on an iPad or iPhone, it's something that I'd recommend trying out. With the DSLR and mirrorless camera markets getting smaller and smaller, it's more important than ever for a pro to start thinking about the future. If you don't need a particular feature, maybe consider a more basic model, or pricier option with a longer life span to prepare for the future. The idea is to keep up with the changing trends and stay on top of the competition. With the DSLR and mirrorless getting increasingly easy to use, our view is that by upgrading your options you'll take the edge off the competition. When you work on the move, you'll want to do everything you can to make sure you can access your images wherever you go. We all know how convenient the iPad Pro is with its on-the-fly photo editing. Each tool in Photoshop provides a particular kind of pixel manipulation, and you can use more than one tool to create different effects. A pixel manipulation tool can be used to move the pixels of an image, clone pixels, create or destroy pixels, or make changes to the pixels in a mask. Like a macro, a pixel manipulation tool can also be used to apply particular effects to a very large number of similar images with a few keystrokes. This allows you to apply the same effects to a collection of images, so you can create a repeatable procedure that can do the same thing any time you want. I'm a product manager at a large tech company. In my job, I'm fortunate to work on a product that has a billion users. The thing is, I'm a product manager; I'm not a designer. So when I first joined the studio, my colleagues set me straight. I'm not a designer—I'm a product manager. And that's a good thing. A product manager's job is to share the company's vision with users, while a design leader's job is to help create it. Both are essential to the success of any product. That's why I'm working with the best today. I'm excited to announce that I'll be getting the Photoshop team together for a daily lunch, and I'm hoping to recruit more of you to join me. Share for Review (beta) enables users to collaborate without leaving Photoshop, even when editing images in a browser. It turns a Skype call or Google Hangout directly into a collaborative three-dimensional canvas for editing, so everyone can see and work at the same time. Users can also share a temporary version of an image for review before sharing a final version and preserving important details in editors' original files. Edit in Browser, a preview tool originally introduced as a product in the Adobe mobile app, brings the mobile version's powerful features and performance to Photoshop on the desktop. It lets users resize, view, scroll, and copy and paste an image and even apply filters, gradients, and editing while sharing their work in real time. And the new Delete and Fill tool, which overlays a guide across the top of the image, takes the design process to a new level, redefining the tools users rely on for removing and replacing objects. Adobe Smart Filters, which automatically adjust contrast, color, and exposure, and enable users to create a more professional-looking image even in photos with poor lighting or a simple setting, are also available to enhance photos taken on a phone across desktop. These new features are available as updates to Photoshop, available online at www.adobe.com/creativecloud. As part of the annual release of Photoshop, the desktop version is now the official photo editing solution for Windows and Mac, providing even more powerful tools to designers and artists.
